

This conference is focused on the methodology of analysis of the circulation of ancient Greek coins. It will compare the approaches in terms of mapping and of network analysis and provide new studies on various aspects of coinage circulation in the ancient Greek world. For abstracts of the papers, see the conference website: ods.uchicago.edu/coin

This conference is made possible by a grant from the France Chicago Center and the support of the University of Chicago Center in Paris; and by the U.S. National Science Foundation through its generous support of the CRESCAT project and the OCHRE computational platform. Technical support and data management for academic projects using OCHRE is provided by research data specialists Sandra Schloen and Miller Prosser (<http://ochre.uchicago.edu>).
